Portfolio Website: <https://elijahmon.github.io/Portfolio/>

Summary

Versatile game designer with 10+ years of experience in the development and live service of multiplayer/social-focused games. Well-versed in data driven design for live PC and mobile products delivering events, sales, and feature releases that achieve and exceed product goals. Detail-oriented and proactive, examining feedback, analytics, and taxonomies to identify gameplay opportunities, improve UX, and expand product reach. An effective communicator who bridges disciplines, presenting technical designs clearly and coalescing multidiscipline teams through concept, iteration, release, and continued live ops support to deliver exciting and engaging gameplay experiences for players.

Technical Skills and Experience

- Unity Engine
- Unreal Engine
- Blender
- C languages (C#/C++)
- Microsoft Office Suite
- Adobe Suite
- Google Suite
- Figma
- HTML/CSS

Education

B.S. in Simulation and Digital Entertainment – University of Baltimore

- Game Lab Fellow
- Inspired Discoveries 2015 winner with Project “Relic”

Professional Experience

Web Design Contractor, Pandemonium Studios LLC - Current

- Develop prototypes in Figma, focusing on UX and usability for commercial web pages
- Web design for PlayIndies (2026) service used by thousands of developers and creators worldwide.
- Work with front and backend developers to ensure proper usability and functionality specifications/standards are met.

Sr. Game Designer, Nant Games: 2020-2025

- Lead designer for feature and systems teams on [MythWalker](#) (2024) a Free to Play, Geolocation based, MMORPG. Including documentation and implementation of key retention and monetization systems such as Character Progression, Crafting, Quests, Storefront/Sales, and Rewards using Unity.
- Establish revenue goals, player profiles, and create documentation for all Progression, Economy, and Monetization systems that exceeded ARPPU goals.
- Lead design of unique Geolocation Features for Mythwalker, including Energy based navigation, teleporting and work with patented technology to develop the Location Tethering system.
 - Utilize [MapBox](#) and [OpenStreetMaps](#) to lead geolocation map and encounter design. Developing systems to dynamically generate encounters around the world based on regionality, weather, and time of day.
- Work with analytics in Tableau to compile reports to create roadmap and updates to make regular balance updates, as well as prototyping new functionality for abilities and systems.

Game Designer, Big Huge Games: 2017-2020

- Design and implement in Unity (C#) as a part of the prototype team, developing core gameplay of [Arcane Showdown](#) (2020), including Narrative/Worldbuilding, Card design, Matchmaking, Rewards, Progression, economy balance, and Guilds. Releasing worldwide with over 1000 daily active users and ~\$1.00 average revue per user.

- Work with KPIs to achieve monetization, retention, and engagement goals, using data driven insights from live tests, analytics, market research.
- Design of Live ops Events, Sales, new troops, and general combat balance for Free to Play, PvP Strategy/Base Builder [DomiNations](#) (2015)
- Rapid prototyping specialist, designing and implementing networked gameplay systems in Unity and Unreal Engine focused on the Gameplay Ability System, Blueprints, and C++ for multiplayer PvP projects.

QA Tester I, Big Huge Games: 2016-2017

- Manage Builds and Deployment for testing Mobile development of DomiNations across multiple environments including bundle management for live ops events and sales.
- Develop, run, and deploy automated testing for DomiNations within Unity utilizing C# and Python.
- Work with multiple disciplines tracking content, bugs, and feedback for multiple releases including World War, Global & Atomic Ages, University, and VIP/Treasure Boat.

Unity Developer, Alchemy Learning: 2015

- Develop and implement educational VR games in unity and business development tools using Oculus and GearVR creating levels, scripted sequences, and gameplay systems for the Amazon Experience and Workforce Development Experience.
 - Work featured on WBAL-TV, Baltimore Business Journal and [Technical.ly](#) highlighting Alchemy's innovative use of VR in education and workforce development apps.
 - Work with Speech Recognition software including [SMUSphinx](#) and [IBM Watson](#) to categorize, score, and display user public speaking results and offer tailored feedback and improvement areas.

Gameplay Design & Programmer, University of Baltimore: 2014

- Founding member of University of Baltimore's Gamelab, including lab setup, administration, and construction of onsite C.A.V.E virtual reality system.
- Lead a student team in developing historic preservation and learning experiences for the Bungamati Temple and Baltimore City Historic Society.
- Work with students attending the game lab to provide feedback and mentoring for classes and capstone projects

QA Contractor, Zenimax Online Studios: 2013, 2014, 2016

- Create test cases, track bugs, and provide feedback for [Elder Scrolls Online](#) (2014) PC release and subsequent console releases (2015), including working with proprietary engine tools and platform SDKs.
- Imbedded in dungeon and trial design teams playtesting and providing feedback for future content including Aetherian Archive, Hel Ra Citadel, Craglorn and Imperial City zone releases, including making add-ons using Lua that expedited test processes and exposed technical issues early in development.
- Support web team developing automated tests using Ruby to automate testing of ESO web storefront.
